**Homework #2**

# ListView & Using Intents

Create the app which contains two activities as shown below:

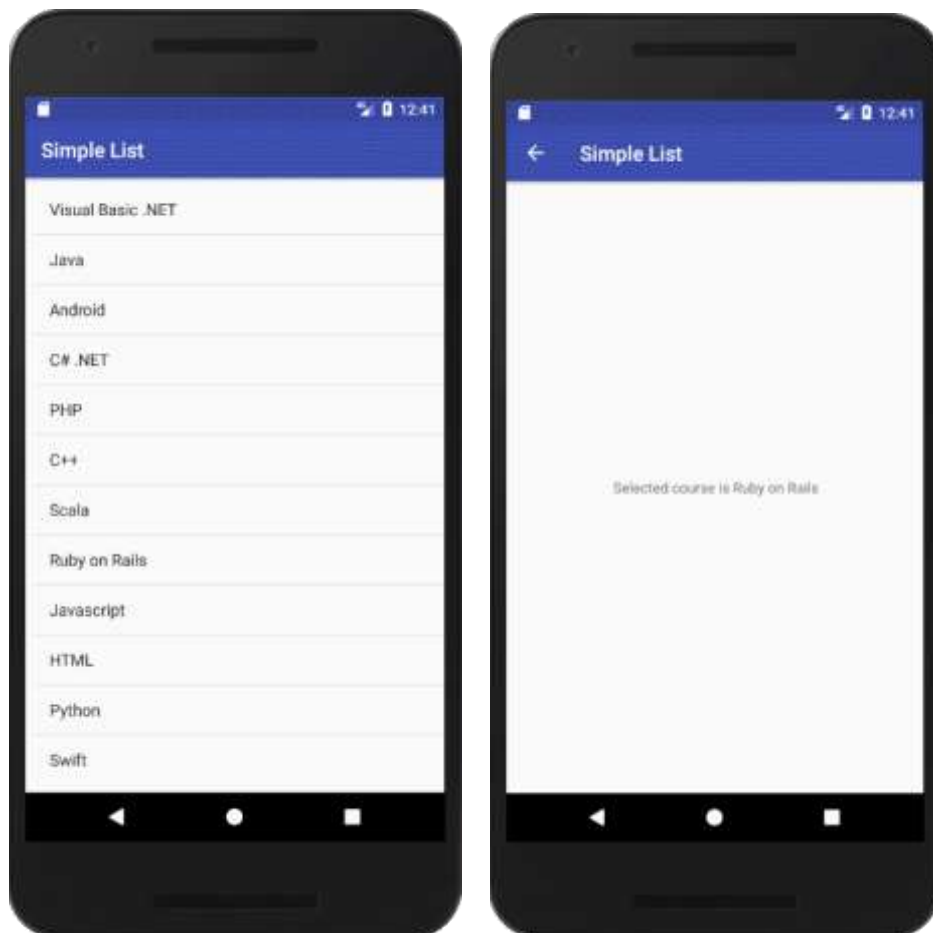

The main activity contains list of programming languages as declared in the following array:

**String[ ] myData = {"Visual Basic .NET", "Java", "Android", "C# .NET", "PHP", "C++", "Scala", "Ruby on Rails", "Javascript", "HTML", "Python", "Swift"};**

When you select an item on the list, you typically go to a new Activity. In the image above, we've selected Ruby on Rails from the previous list of programming courses.
